

Google Slides Templates Customization Guide

This guide explains how to safely customize the visual design of your Google Slides templates while ensuring the automation script continues to function correctly.

The Three Essential Templates

The project uses three distinct templates to generate images. Each serves a specific purpose:

1. **Pin Slide Template:** Generates the standard vertical Pin image for Pinterest.
 2. **Collage Slide Template:** Generates a collage image that is placed **INSIDE** your WordPress article.
 3. **WP Featured Image Template:** Conditional usage. If the template is empty, the script uses the original photo. If used, it applies your custom design/frame to the featured image.
-

Configuration in Google Sheet

Once you have designed your templates, copy their IDs from the URL and paste them into your Config_Accounts tab in the following columns:

1. "Pin Slide Template ID"
2. "Collage Slide Template ID"
3. "WP Featured Image Template ID"

 **Where to find the ID:** The ID is the long string of characters in the URL of your Google Slides presentation:

`docs.google.com/presentation/d/ [THIS_IS_YOUR_ID] /edit`

What You CAN Change

You are free to modify the aesthetics to match your brand:

1. **Fonts & Typography:** Change the font family, color, and weight of any text.
 2. **Colors & Branding:** Change background colors, shape colors, and add your logo.
 3. **Layout & Positioning:** Move elements around (as long as they remain on the slide).
-

WHAT NOT TO CHANGE (The Golden Rule)

To keep the automation working, you **MUST NOT** modify the "Description" (Alt Text) of the elements. The script uses these descriptions to find where to put the image and

title.

⚠ DO NOT RENAME THE DESCRIPTION OF THESE ELEMENTS:

Element Type	Required Description (Alt Text)	What the script does
Image	image principale	Replaces this with your main recipe photo.
Text Box / Shape	Titre	Replaces the text with your generated title.
Image (Collage only)	image principale 2	Replaces this with the second collage photo.

💡 How to set the description:

Right-click an element in Google Slides > Alt Text (or Format Options > Alt Text) > Type the name exactly in the "Description" field (not Title).

Step 1: Open your template in Google Slides.

Step 2: Edit your colors, fonts, and graphics.

Step 3: Ensure the elements have the correct "Description" as listed above.

Step 4: Save and let the script do the rest!
