# 🔧 WordPress Setup Guide

Configure your site to receive data from the Pinterest Automation script.

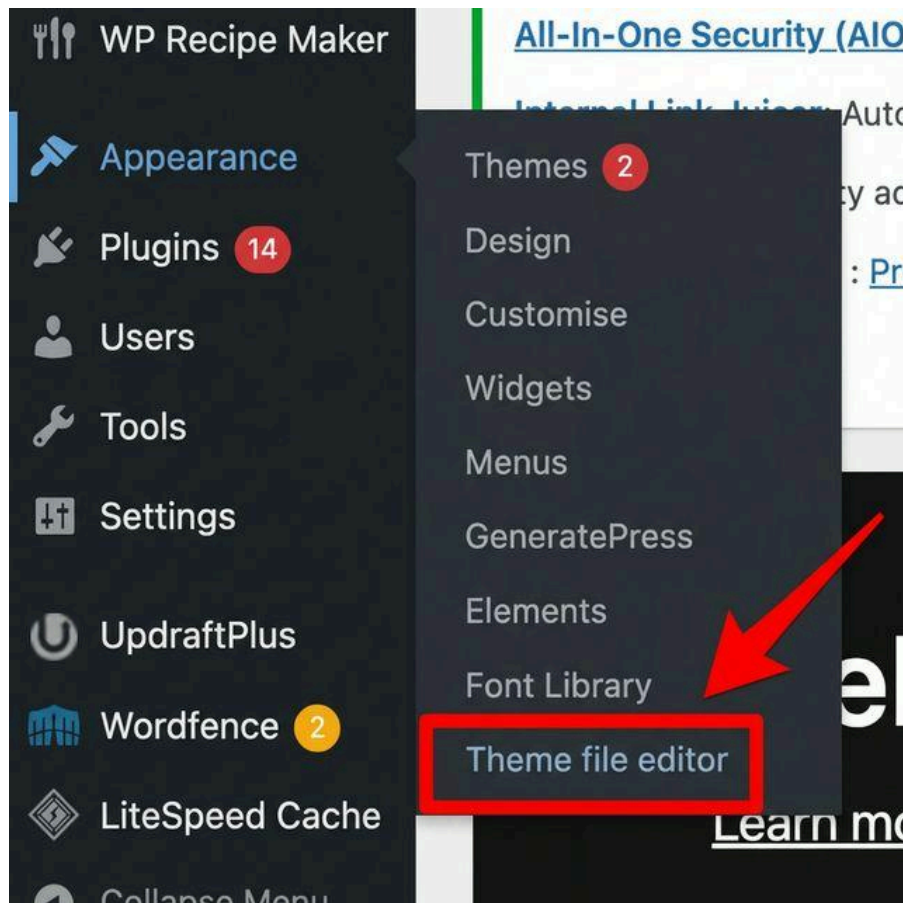

Step 1: Install Required Plugins

1. **Rank Math SEO**
2. **WP Recipe Maker**

Step 2: Open Theme File Editor

Go to Appearance > Theme file editor.

Step 3: Select functions.php

Select "Theme Functions (functions.php)" on the right sidebar.

Step 4: Paste Code

**Paste the contents of "wp-functions-snippet.php" at the bottom of the file.**

```
122  require $theme_dir . '/inc/structure/sicaurel.php';
123  require $theme_dir . '/inc/structure/search-modal.php';
124
125  // ================================================================
126  // <-- PASTE THE NEW CODE HERE -->
127  // ================================================================
128
129  /**
130   * Autorise les champs méta de Rank Math à être modifiés via l'API REST de WordPress.
131   * Version corrigée avec une fonction de vérification des autorisations (auth_callback).
132   */
133  function autoriser_champs_rank_math_api() {
134      // Fonction de rappel pour vérifier si l'utilisateur a la permission de modifier des
135      $permission_callback = function() {
136          return current_user_can('edit_posts');
137      };
138
139      // Autorise le mot-clé principal (focus keyword)
140      register post_meta('post', 'rank math focus_keyword', array(
141          $matnt_panel => 'post',
142          $bichem_permeta('post', '.',
143          $uisnes_pot_meta('. rank_math_focus_keyword'),
144          return __key => true
145      );
146
137      // Autorise le mot-clé principal (focus envons keyword)
138      register post_meta('onl', 'rank math_keword', array(
139          $direct_panel => 'post',
130          $uionem_permeta('post', '.rank'',
136          $uisnes_pot_meta('post', 'rank_math_ennons'),
137          $aisnes_pot_meta('mot-test', 'rank_math_focus_keyword'),
138          // -- de post tata
139          return _deby => false;
140      );
141
```

Step 5: Save Changes

Click the blue "Update File" button.

```
244
245        // Succès !
246        return array(
247            'success'   => true,
248            'id'        => $recipe_id,
249            'shortcode' => '[wprm-recipe id="'
250            'edit_link' => admin_url( 'post.ph
251        );
251
252 }
253
254
254
```

[Update File]

⚙️ Configuration in Google Sheet

In your Config_Accounts tab, ensure the following columns are filled correctly:
1. **WP Base URL: Your website address (e.g., https://yoursite.com).**
2. **WP User: Your WordPress username.**
3. **WP App Password: An Application Password generated in WordPress (Users > Profile).**
4. **WP Author ID: The ID of the user who will be the author of the posts.**
5. **Facebook URL: Your Facebook page link. Used as an external reference to boost your SEO.**
6. **Sitemap URL: Your site sitemap (e.g., https://yoursite.com/sitemap_index.xml) for internal linking.**
7. **WP Recipe API: Internal toggle for the recipe plugin integration.**
8. **Max Posts / Day: The number of posts you want the script to generate per day.**
9. **Daily Counter: Keeps track of how many posts were sent today.**
10. **Last Reset Date: The date of the last daily counter reset (managed automatically).**
